

AF/AN/NF thin wafer aligners

-  Unique 3-roller design lifts wafers from the cassette side wall to eliminate abrasion and edge chipping
-  Antistatic black polyurethane roller is designed to resist the cutting from sharp thin wafers
-  Extends the lifecycle of the process cassettes

Unique thin wafer roller and alignment system gently captures and positions flats or notches for clean and accurate operation. Special material roller resists the cutting action from accurate thin wafer rotation. Three roller design is engineered to keep the wafers from contacting the side wall of the cassette to extend the cassette lifecycle and eliminate edge chipping commonly associated with rotation of thin wafers with a standard aligner. EZ Guide positioners assure properly positioned cassettes. ESD protected by static-dissipative plastics.

Automatic 150mm Thin Wafer Flat Aligner
Automatic 200mm Thin Wafer Notch Aligner
Manual 200mm Thin Wafer Notch Aligner
